Un-enforcable

How has this happened?

MOST OPEN

Licenses

LEAST OPEN

This work is a CC0 Public Domain Dedication work.

Icons

Terms of the Licenses

Public Domain Dedication (CC0)

This is considered a dedication to the public domain, and thus the creator(s) associated with this item have waived all their rights to the work worldwide under copyright law.

Attribution (BY)

Others can copy, distribute, display, perform and remix the work if they credit/cite the creator/author.

Derivative Works (ND)

Others can only copy, distribute, display or perform verbatim copies of the work. (No modifications allowed.)

Share Alike (SA)

Others can distribute the work only under a license identical to the one attached to the original work.

Non-Commercial (NC)

Others can copy, distribute, display, perform or remix the work but only for non-commercial purposes.

How do I permanently link an author to a work?

How do I know which version is the original?

How can I trace the 'licence chain' between works?

How do I know who is using the derivative work?

How has this happened?

INNOVATION
Centre

Option A

Create a World OER Registry

There are parallels...

World OER Registry

- Who runs the registry?
- Who funds it?
- Who profits?
- Who decides inclusion criteria?
- How can it be abused?

Option B

Blockchain to the Rescue

Blockchain to the Rescue

**governed by the
community**

**decentralised and
resistant to failure**

**tokenisation allows for
credit**

**attribution and ownership
through cryptography**

Interest in Blockchain is waning...

A Web of OER

Identify newly Published OER

Identify the 'first publication' of any digital resource to ensure proper attribution and licencing.

Pinpoint Authors

Link Publications to explicit human beings.

Discover and Re-Use OER Ethically

Respect licence conditions when using, adapting re-publishing.

Track Citations

Use citations to identify the best OER

Foundations of the Web of OER

Semantic Web & AI

A move from processing only metadata to processing the data contained within objects.

Identity & Ownership

Linking Real-World Identities to Digital Content in a traceable way

Cryptography & Trust

Unique, Digitally Signed, Tamper-Proof Digital Assets.

Architecture of a traceable OER

Digitally Signed Package

Open Licence
Conditions

Verifiable Credentials

- an open W3C standard
- allow anyone to make a claim about a person or object
- are digitally signed by default
- are timestamped and tamperproof
- are already being widely used in educational contexts
- are 5-star linked open data

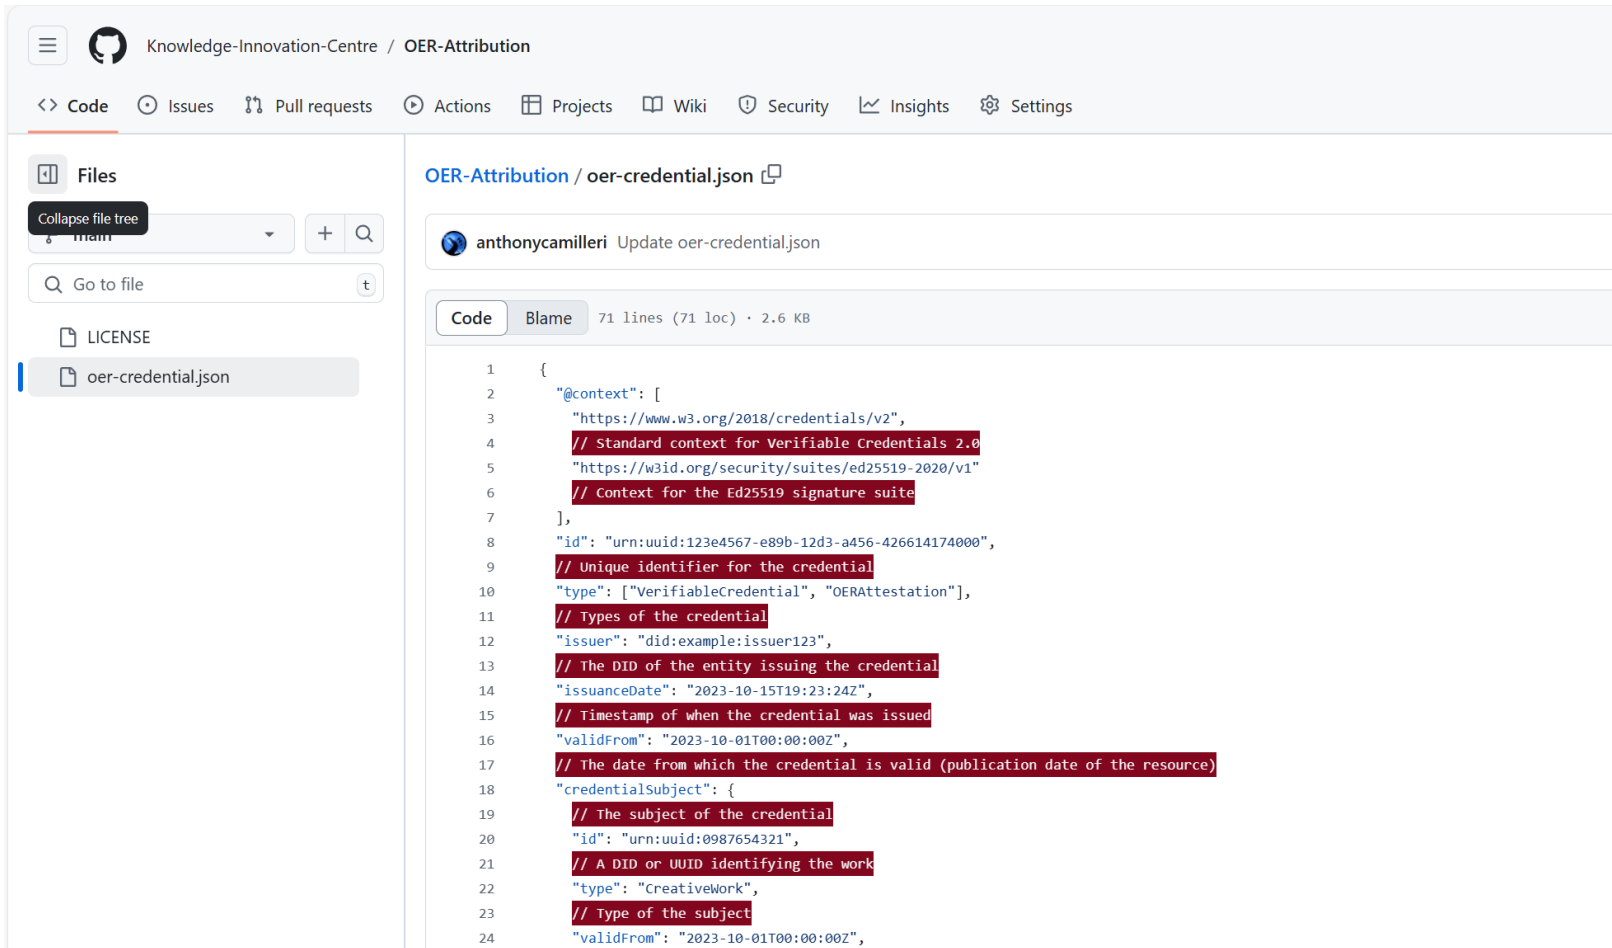

With Verifiable Credentials:

I claim that...

- I made this
- I allow you to use this
- I used another resource
- this is true

This can be done today

The screenshot shows a GitHub repository for 'Knowledge-Innovation-Centre / OER-Attribution'. The file 'oer-credential.json' is selected in the file tree on the left. The main area displays the JSON content of the file, which is a Verifiable Credential. The code is as follows:

```
1 {
2   "@context": [
3     "https://www.w3.org/2018/credentials/v2",
4     // Standard context for Verifiable Credentials 2.0
5     "https://w3id.org/security/suites/ed25519-2020/v1"
6     // Context for the Ed25519 signature suite
7   ],
8   "id": "urn:uuid:123e4567-e89b-12d3-a456-426614174000",
9   // Unique identifier for the credential
10  "type": ["VerifiableCredential", "OERAttestation"],
11  // Types of the credential
12  "issuer": "did:example:issuer123",
13  // The DID of the entity issuing the credential
14  "issuanceDate": "2023-10-15T19:23:24Z",
15  // Timestamp of when the credential was issued
16  "validFrom": "2023-10-01T00:00:00Z",
17  // The date from which the credential is valid (publication date of the resource)
18  "credentialSubject": {
19    // The subject of the credential
20    "id": "urn:uuid:0987654321",
21    // A DID or UUID identifying the work
22    "type": "CreativeWork",
23    // Type of the subject
24    "validFrom": "2023-10-01T00:00:00Z",
```

**Proof of Concept
in Code**

Once we can register OER

- ✓ authors get credit – and any associated rewards
- ✓ content farms and bad content can be banned
- ✓ we create incentives for
- ✓ we can link content to **human beings**
- ✓ AI can quote the original source of a claim
- ✓ AI can respect licence conditions

Beyond Blockchain:
Policy Brief on Next Generation
Web Technologies and their
impact on OER

Get the Report

Next Steps

-  We need a global movement on **technology standards** for OER attribution
-  We need to create a proof of concept to show off the technology to the world
-  Easy to use 'OER Registration' Portal, and integration of 'Publish' functionality into major software packages
